Traci Reilly, Council Member  
Don Tatzin, Council Member

Dear Resident:

California Pavement Maintenance Company, under contract with the City of Lafayette, will be performing maintenance repairs on your street. This work will be done in one or two distinct phases, depending on the design treatment for your street. Please see work schedule on the back of this notice indicating what work is scheduled for your street. Please note that not all streets will receive both of the pavement preservation treatments (please see the schedule on the back of this page for additional information regarding the work scheduled for your street). The hours of construction will be from 8:00 AM to 5:00 PM, Monday through Friday. On some streets work will begin with a chip seal that will blanket the entire road surface with a mat of rubberized liquid asphalt and rock chips. All streets including the chip seal streets will receive a slurry seal as a final finish. Please note that the slurry seal can take up to 4 or 5 hours to dry sufficiently to allow cars to drive on it.

In order to provide the City and its residents with a better looking and longer lasting road, as well as provide the workers with a safe work environment, we ask that traffic closures be observed. During the chip seal process the roads, except Saint Mary's Road, will be closed to traffic for approximately 2 hours. During the slurry seal process the streets, except Saint Mary's Road, will be closed to traffic for a period of up to 5 hours. Access to properties will be restricted during this time as non-emergency vehicles will not be permitted to drive across or on the wet slurry. The City will make arrangements for access by emergency vehicles. In the few days immediately following the chip seal, signs will be posted to advise motorists to reduce speed to avoid kicking up the loose rock chips that would be expected on the roadway. **Please note that if you live off a street that will receive a chip or slurry seal treatment your access will also be restricted.**

Barricades and traffic cones will be placed to prevent vehicles from entering the wet areas. Please do not go around the traffic control devices; chip and slurry seal are tar-like substances that can splash onto the sides of vehicles as well as track onto other surfaces such as driveways and sidewalks if driven through or walked upon while wet. If you do have oil on something, simple dish soap and water will clean the area if caught before the oil has had time to dry. Otherwise we recommend a citrus solvent-type cleaner.

Notification and no parking signs will be placed on the road a minimum of 3 days prior to the start of each phase of work. These signs will provide the roadwork dates when parking on the street will not be allowed. It is very important that our contractor's crews have access to the entire street. Please note that vehicles parked on the street blocking construction activities will be towed at the owners' expense. In order to sweep excess loose rocks after placement, we request that you park off the chip-sealed streets for two days following the placement of the chip seal.

**In the event the contractor is unable to perform chip or slurry seal work on your street on the scheduled day project information signs at the entrance to your street will be updated to provide the new date and times for the work.**

If you have any questions regarding these access restrictions, please contact me at (925) 299-3247.

Sincerely,  
Matt Luttropp, Associate Engineer City of Lafayette
