

Project Update 10/27/17

St. Mary's Road Stabilization Project

Construction is well underway! The retaining wall and rock slope protection has been installed. In the upcoming weeks, Valentine Corporation will be working on improving the storm drainage, installing guardrails and planting trees and other vegetation along the slope. Although a majority of the remaining work can be done off the roadway, please slow for construction, take alternative routes if possible, and expect delays from intermittent lane closures.
