Dear Resident:

VSS International, under contract with the City of Lafayette, will be performing maintenance repairs on your street. This work will be done in one or three distinct phases, depending on the design treatment for your street. Please see work schedule on the back of this notice indicating what work is scheduled for your street. The hours of construction will be from 8:30 AM to 4:30 PM, Monday through Friday. Work will begin with pavement repairs followed by crack filling, and a slurry seal as a final finish. Please note that the slurry seal can take up to 3 hours to dry sufficiently to allow cars to drive on it.

In order to provide the City and its residents with a better looking and longer lasting road, as well as provide the workers with a safe work environment, we ask that traffic closures be observed. During the slurry seal process the following streets will be closed to all non-emergency vehicles (Acalanes Avenue, Palomares Avenue, Ortega Avenue, Perales Street, Nogales Street, Pleasant Hill Circle, Nogales Court, Hampton Road, and Contessa Court). The remaining streets will be coated one side at a time. Access to properties will be restricted during this time as non-emergency vehicles will not be permitted to drive across or on the wet slurry. During the slurry seal process access to your property will not be possible for a period up to 5 hours. **Please note that if you live off a street that will receive a slurry seal treatment your access will also be restricted.**

Barricades and traffic cones will be placed to prevent vehicles from entering the wet areas. Please do not go around the traffic control devices; slurry seal is a tar-like substances that can splash onto the sides of vehicles as well as track onto other surfaces such as driveways and sidewalks if driven through or walked upon while wet. If you do have oil on something, simple dish soap and water will clean the area if caught before the oil has had time to dry. Otherwise we recommend a citrus solvent-type cleaner.

Notification and no parking signs will be placed on the road a minimum of 3 days prior to the start of each phase of work. These signs will provide the roadwork dates when parking on the street will not be allowed. It is very important that our contractor's crews have access to the entire street. Please note that vehicles parked on the street blocking construction activities will be towed at the owners' expense. In order to sweep excess loose rocks after placement, we request that you park off the chip-sealed streets for two days following the placement of the slurry seal.

In the event the contractor is unable to perform slurry seal work on your street on the scheduled day project information signs at the entrance to your street will be updated to provide the new date and times for the work.

If you have any questions regarding these access restrictions, please contact me at (925) 299-3247.

Sincerely,

A handwritten signature in blue ink that reads 'Matt Luttrupp'. The signature is written in a cursive, flowing style.

Matt Luttrupp
Engineering Services Manager
