June 7, 2024

Dear Resident:

VSS International, under contract with the City of Lafayette, will be performing maintenance repairs on your street or a street adjacent yours. This work will be done in one or three distinct phases. Please see work schedule on the back of this notice indicating what work is scheduled for your street. The hours of construction will be from 8:30 AM to 4:30 PM, Monday through Friday. Work will begin with pavement repairs followed by crack filling, and a slurry seal as a final finish. Please note that the slurry seal can take up to 3 hours to dry sufficiently to allow cars to drive on it.

In order to provide the City and its residents with a better-looking and longer lasting road, as well as provide the workers with a safe work environment, we ask that traffic closures be observed. No road closures will take place during the pavement repair or crack fill process, though No Parking signs will be on the streets. During the slurry seal process the following streets will be closed to all non-emergency vehicles: Fallen Leaf Court, Sibert Court, Tanglewood Drive, Goyak Drive, Hermosa Court, Hillcrest Drive, Oak Court, Vacation Drive, Quandt Road. The remaining streets - Acalanes Road, Golden Gate Way, Mt. Diablo Boulevard, Mt. View Drive, Pleasant Hill Road, and Saint Mary's Road - will be coated one side at a time. Access to properties will be restricted during this time as non-emergency vehicles will not be permitted to drive across or on the wet slurry. During the slurry seal process access to your property will not be possible for a period up to 5 hours. **Please note that if you live off a street that will receive a slurry seal treatment your access will also be restricted.** A map of the limits of the work is posted on the City's website on the 2024 Surface Seal Project page.

Barricades and traffic cones will be placed to prevent vehicles from entering the wet areas. Please do not go around the traffic control devices; slurry seal is a tar-like substance that can splash onto the sides of vehicles as well as track onto other surfaces such as driveways and sidewalks if driven through or walked upon while wet. If you do get oil on something, simple dish soap and water will clean the area if caught before the oil has had time to dry; otherwise we recommend a citrus solvent-type cleaner.

Notification and No Parking signs will be placed on the road a minimum of 3 days prior to the start of each phase of work. These signs will provide the roadwork dates when parking on the street will not be allowed. It is very important that our contractor's crews have access to the entire street. Please note that vehicles parked on the street blocking construction activities will be towed at the owners' expense.

In the event the contractor is unable to perform slurry seal work on your street on the scheduled day, project information signs at the entrance to your street will be updated to provide the new date and times for the work. The following page shows the anticipated days of roadwork for the pavement repair and crack seal portions of the project, along with the planned road closures for the slurry seal portion of the work. These days may be subject to change, and any schedule update will be posted on the City's website under the 2024 Surface Seal Project.

If you have any questions regarding these access restrictions, please contact me at (925) 299-3245.

Sincerely,

Tim Clark

Associate Engineer

Street and Limits of Work	Pavement Repair (No Road Closure)	Crack Fill (No Road Closure)	Slurry Seal (Road Closure)
