Don Tatzin, Council Member

Dear Resident,

International Surfacing Systems, under contract with the City of Lafayette, will be slurry sealing your street. Please see work schedule on the back of this notice. The hours of construction for Reliez Valley Road and Springhill Road will be from 9:00 am to 2:00 pm, Monday through Friday. On all other streets the hours of construction will be from 8:00 AM to 5:00 PM, Monday through Friday. The slurry seal material will cover the entire roadway surface to seal the existing pavement or recently applied chips to provide a finished wearing surface. The slurry seal can take up to 4 or 5 hours to dry sufficiently to allow cars to drive on it.

In order to provide the City and its residents with a better looking and longer lasting road, as well as provide the workers with a safe work environment, we ask that traffic closures be observed. During the slurry seal process, Vista Bella and Valente Court will be closed to traffic and access to your property will not be possible for a period up to 5 hours. No other street closures will be used, but traffic delays are to be expected due to lane closures and traffic control. The remaining streets to be slurry sealed will be sealed one side at a time. Access to properties will be restricted during this time as non-emergency vehicles will not be permitted to drive across or on the wet slurry. In addition the City will make arrangements for access by emergency vehicles. Access to adjoining streets and Springhill Elementary Parking lot will be permitted.

Barricades and traffic cones will be placed to prevent vehicles from entering the wet areas. Please do not go around the traffic control devices; slurry seal is a tar-like substance that can splash onto the sides of vehicles as well as track onto other surfaces such as driveways and sidewalks if driven through or walked upon while wet. If you do have oil on something, simple dish soap and water will clean the area if caught before the oil has had time to dry. Otherwise we recommend a citrus solvent-type cleaner.

Notification and no parking signs will be placed on the road a minimum of 3 days prior to the start of work. These signs will provide the dates when parking on the street will not be allowed. It is very important that our contractor's crews have access to the entire street. Please note that vehicles parked on the street blocking construction activities will be towed at the owners' expense. In order to sweep excess loose rocks after placement, we request that you park off the slurry sealed streets for two days following the placement of the chip seal.

If you have any questions regarding these access restrictions, please contact me at (925) 299-3247.

Sincerely,
Matt Luttrupp
Associate Engineer, city of Lafayette

Street	Slurry Seal
Valente Court Acalanes Road to End	Wednesday, September 12
South Silver Springs Road Silver Springs Road to Silver Springs Road	Wednesday, September 12
Silver Springs Road S. Silver Springs Rd to Silver Springs Road	Wednesday, September 12
